## Have You Seen the Fifth Wheel?

This Is a Strong New Weber Wagon Feature

YOU can find the new fifth wheel, the biggest wagon improvement, only on International wagons. We can demonstrate how the Weber fifth wheel makes the best wagon still better.

The famous fifth wheel, on the Weber, made of strong, malleable iron, with large wearing surface, does these things: It distributes the strain on the front bolster and sandboard; overcomes pitching of bolster, so preventing bending or breaking of the king bolt; does away with pulling up of front bolster and bending of circle iron.

The top plates of the fifth wheel are widest, so the lower plates are protected and no dirt gets in between. The more you study the merits of this feature, the more you will appreciate its importance.

Isaac Hall of Beskett, O., arrived here Monday and is employed by the Altimo Culture Co. He is a brother-in-law of W. E. Smith with whom he makes his home.

B. I. Haskins and family, who resided on the Osborn farm west of the village the past year, have removed to Youngstown, their former home, residing at 1756 Oak Hill avenue.

Mrs. Mary Misner has returned to the village for a few days. She has been at Mt. Sterling, Ohio, her old home, for several months and has decided to make it her permanent residence.

District School Superintendent Fred Myers was in Columbus the latter part of last week and called on members of the legislature in the interest of educational matters being considered by that body.

Mr. and Mrs. Roy J. Deifs, daughter Lella and son Robert left Monday for St. Louis where Robert, who was badly injured some years since in an automobile accident, will be treated in a sanitarium for several months. Mr. Deifs will return home within a few days but his wife and daughter will remain with Robert.

O. B. Moore, manager of the Smith-Bachmann Machine Co., returned home last Saturday night from New York where he booked orders for about \$25,000 worth of rubber hose making machines. The company has other important orders which assure steady operation of the plant for several months to come.

## NOODLE SUPPER

The ladies of the M. E. Church will serve a noodle supper in the church dining room Wednesday evening, Mar. 19, from 5 to 8 o'clock, to which the public is invited. Expense, 30c.

Job was a patient man, but there was no bone-dry legislation in his day.

## LEATHER IN FAVOR

Soft Suede Is Brought Out for Spring Jackets.

Pliable Material May Be Dyed in Seasonable Colors and Will Admit of Alluring Combinations.

The unheralded advent of leather coats in the autumn fashions gave the public a jolt and a surprise. It is whispered, writes a correspondent, that even the designers were not quite aware of the strength that the fashion would assume. Waistcoats of leather, jackets of leather and fur combined, were taken up by smart women in war work and remained as a street costume for peace activities.

The idea brought about a train of other ideas. Soft suede and pliable leather have been brought out for spring jackets. The suede is dyed in the spring colors, and one of new leather which goes with a white crepe

Rainproof Suit of Black Leather.

de chine skirt, is quite alluring. Such a combination is obviously intended for Southern usage, but the soft, black leather coats with bright linings are intended for the streets of big cities. They carry skirts of cheviot, serge and heavy silk jersey. The latter is again considered most desirable by well-dressed women.

## VOGUE FOR DECORATIVE WORK

Combination of Braid and Embroidery Where All-Braid Embellishment Is Not Desirable.

When there is a considerable surface to be decorated, it is rather tedious and tiresome to embroider the whole thing. And so the vogue for combining both braid and embroidery is a fortunate one where the all-braid decoration is not desirable.

The braid part of the combination usually confines itself to soutache, and the embroidery is interspersed in long, stitch dabs. According to this method, the braid need not take the form of intricate scroll work. As a matter of fact, the work is very much more effective when the design is simple and bold, for the intervening embroidery can then be quite large and so much more effective.

Large spirals "spoked" with long, straight stitches in silk or wool make very fetching decoration with silk soutache of a contrasting color. Then the zigzag treatment of soutache may be given more decorative value by introducing large dots between the turns, worked solid.

## FLOWER HOLDERS FOR TABLE

Ivory-Colored Porcelain Makes Up Attractive Set for a Pleasing Centerpiece.

Several years ago, when sets of porcelain flower holders, which, linked together to form a great centerpiece, came in, they caused almost a dinner sensation. They seemed too much of a vogue to stay, but they are here still.

One such set that recently attracted attention is made of ivory-colored porcelain. There are several narrow, troughlike flower holders that, pushed together, form an irregular oblong in the center of the table. Small, short-stemmed flowers are arranged in masses in these dishes.

Then there are eight tall candlesticks to match, and they are grouped around the flower dishes. A mirror fits nicely into the space defined by the flower dishes, and of course reflects the flowers above and around it.

Guard the Children's Health

Mrs. Elaw, Box 26, Bennett, Wis., writes: "We have always used Foy's Honey and Tar for colds and it did great. The children all run for it when they see the bottle and ask for more." Contains no opiates, safe, and harmless, but gives prompt relief to coughs, colds, croup and whooping cough. Sold everywhere.

It is said that laughter will cure indigestion; but the trouble is that when a man has indigestion he doesn't feel like laughing.

## HALT HOG CHOLERA RAVAGES

Farmers Should Insist on Animals Being Vaccinated by Competent Veterinarian.

(Prepared by the United States Department of Agriculture.)

Farmers should insist that all the stock hogs which they purchase for feeding purposes should be properly vaccinated by competent and conscientious veterinarians in order to prevent the spread of hog cholera. Unlike the larger stock yards of the country, which are properly protected by qualified government representatives, many of the smaller local yards are entirely without safeguards against cholera.

Immature hogs go from the farms of origin mainly because of lack of feed or on account of disease. The purchaser who buys such sick hogs on the market for feeding purposes usually introduces disease into his home herd. To stimulate production and to conserve our available pork supply none but healthy hogs should be maintained in the feeding lot. If the farmer wishes to aid in increasing food supplies, he should help increase our hog supply by routing disease.

The practice of buying hogs from public stock yards for feeding and stocking purposes, a custom which has been intensified in this war emergency, has to a large degree complicated the work of controlling hog cholera. In many cases, owing to improper equipment for immunization and disinfection of hogs, new centers of infection have been introduced in communities previously free from the disease, and the movement of hogs from public stock yards having no supervision by state or federal authorities and where treatment for the prevention of cholera is not compulsory is a serious handicap in the fight to prevent the spread of infection.

Some losses have resulted from shipments of stocker hogs even when originating at public stock yards having government inspection, particularly in the early beginning of extensive movements of these animals for feeding purposes. Several factors were responsible, such as improper equipment for immunization and disinfection, insufficient dosage of serum for hogs exposed to infection, the application of treatment promiscuously by anyone chosen by the buyer of the hogs, and the use of the serum-alone treatment, which produces an immunity of very short duration. These are proofs positive that "haste makes waste" but these objectionable features are being overcome. Where proper equipment is being installed, dosage of serum increased and the treatment placed in the hands of competent veterinarians, losses occurring in shipments of this character have been reduced to a minimum.

There is reason to believe that with the various agencies in each state, such as county agents and farm bureaus, interested in the increased production of meat animals, a system of exchange could be established to bring together farmers with a surplus of hogs and no feed and those having more feed than hogs, with a view of having the transfer of these animals effected locally and avoid the long and dangerous journey to a public stock market and back to farms oftentimes in the same community.
